

ABSTRACT

Methods and apparatus for managing devices and content in a network environment. In one implementation, a method of presenting content data includes: receiving at a client in a hub network a present request indicating locked content data; 5 checking a license corresponding to said locked content data to determine if said license permits said client to present said locked content data; and presenting said locked content data through a presentation component connected to said client; wherein said license of said locked content data is bound to said hub network.
